### Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with carver 2000 heater manual . To get started finding carver 2000 heater manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

### carver 2000 heater manual

The Fanmaster is designed to fit on to the back of the installation box of any Carver. The integral elements are automatically or manually switchable between OkW. The gas pipe servicing the heater passed under the floor in the chassis from one side of the caravan to the other. After disconnecting both end of the pipe and blowing compressed air through it, it was full of dirt. The dirty lay in the lowest point, reducing the gas flow. Base Vehicle Rust 02 Sprinter German engineered from recycled 1960 Fiats. The gas pipe servicing the heater passed under the floor in the chassis from one side of the caravan to the other. After disconnecting both end of the pipe and blowing compressed air through it, it was full of dirt. The dirty lay in the lowest point, reducing the gas flow. Circumstances which were reproduced by placing a tarpaulin close to the windward side of the caravan. Could see the gas flame in the sight glass easier and it was blue with no trace of the earlier, less hot, luminous yellow flame. Seemed to be bit more heat which my current wife confirmed. An old pc fan should do the trick. Updated every 90 seconds. If you use this forum you allow that this page is storing cookies on your computer. You can find more infos in our Cookie Policy. In the Lunar manual it says press the restart button but I cannot locate it. Do you. User name lloydwjones or search. Repair to Carver Caravan Space Heater Control Unit We replace the motherboard whatvelse could be wrong Answer questions, earn points and help others. Can you suggest anything hi looking for a slid control for a carvar 5500 turbo fan master heater. User name lloydwjones or search Repair to Carver Caravan Space In the Lunar manual it says press the restart button but I cannot locate it. Do you have. Could this be caused by a faulty element and if this is the cause Try tailoring the broken board by soldering all the dry joints, getting a new one is only by buying a new. It is a dual fuel unit, this means that it runs on 240v mains electric and gas. This allows the whole caravan to be kept a specific temperature. 240 Volt Operation This unit cannot be used as a convector heater, it will over heat with out the fan in operation. Gas Operation The gas control knob is also located on top of the space heater body. There are two types of gas ignition, manual and automatic according to the model of heater. The manual type uses a press down pitzo ignighter.

To use, turn the dial to 10 or the ignition sign and depress, hold for a few seconds then depress the pitzo ignighter a click will be heard, if the burner does not light depress the pitzo until it does, it may take a while for the gas to come through. If it still does not light it may be over gassed, leave the heater for a few minuets and try again. When the burner lights the flame will be visible through the viewing window in the heater cover. Keep the knob depressed for 10 seconds then release, the main burner will light. Use the dial to set burner to desired setting. The automatic type of heater is fitted with electronic ignighter as you depress the heater knob it will operate a microswitch sending a spark down to the burner. Keep the knob depressed until the "click" stops, this will indicate that the burner has lit. Keep the knob depressed for 10 seconds then release, the main burner will light. When on is pressed a light will appear at gas auto fan and flash. If this setting isn't required press the on button again and the light will move to Gas slow fan, repeat until the required setting is reached. The light will flash then stay lit, this indicates that all is ok and your chosen setting will be put into operation. This can be set to the required point on the dial and will control the burner operation. Elec Slow Fan As gas slow fan but for the electric operation of the heater. To stop any operation of the fanmaster, press off at any time. Remember to switch off the mains electric switch to avoid over heating. There may be an outlet that doesn't have a controller, this it to protect the fan from over heating. The manual is a bit vague in its description and the heater doesnt actually have any name, model number, etc., on it. As we got the van in September we havent needed to use the heater so far, and when I went round the van getting used ot everything I checked the heater on gas and I assumed electricity combined on 240V hookup, of course.

The manual seems to say that you can use the heater with gas or electricity or both together. Just tried running it on electricity alone and all I seem able to get is lovely cold air being ducted around. Should the 4000 be able to run just on mains. Alternatively does anyone have a website for Carver cant find then witha Google search TIA MikeSteve and SharonI am beginning to wonder if mine

actually is a 4000 as the controls dont match your description. Forgot to say in my original post that the van is a 2000 so perhaps there have been changes. My control panel is the Zig and doesnt have any controls for the heater just the water heater, water gauge, battery condition, waste level indicator, and switches for pump and lights. On the fire itself ignoring the gas element the only controls are a three position switch for the fan off, low speed, high speed and a slider which must be intended to control heat level. MikeIm sure someone out there can. StevePlease enter your desired user name, your email address and other required details in the form below. Note that passwords are casesensitive. It has become difficult to light it has a manual peizo spark igniter and when eventually lit there is a yellowish tinge to the pilot light flame. I am not confident that it is now safe to use and would like to service it if possible. It appears that fully servicing the heater will not be possible without removing it from the van. I presume that if I entrusted this work to a caravan service centre, even if they would accept the job on such an old van, then it would have to be removed from the van with the obvious increase in expense etc. I have access to the installation instructions and assume that it will be possible to remove the heater from the van by reversal of those instructions. Has anyone successfully done this before. Does anyone know whether a service kit is available for this heater.

I would prefer to do the job myself with the assistance of a friendly gas engineer, or actually watch someone doing it, as when I entrusted my fridge service to a mobile service I didnt see what was done and the fridge was definitely not removed to access the back of it. It may be possible to get a universal igniter and thermo coupling. From my limited experience with caravan heaters the biggest problem is insects that get into the jet, it normally means undoing the gas supply pipe from underneath the van and 4 screws that hold the heater in, It should be possible to gain access to the jet for cleaning. An Hoover with a small nozzle will remove and muck thats built up.The lighting instructions in the Carver installation, operation and fault finding instructions differ slightly from the instructions in the Bailey owners manual. When following the Carver instructions the heater lit first time without any problem. The logged keystrokes are saved into a text file and can be 9 Aug 2018 Ive recently bought a year 2000 Abbey GTS Vogue 216 that has a Carver 5500 Turbo Fanmaster heater fitted, but no instruction manual, Ive recently bought a year 2000 Abbey and it has a Carver 5500 Turbo Fanmaster manual for my water heater which I think is also made by Carver.
